² Affiliation 2; e-mail@e-mail.com

* Correspondence: e-mail@e-mail.com; Tel.: (optional; include country code; if there are multiple corresponding authors, add author initials) +xx-xxxx-xxx-xxxx (F.L.)

† Current address: Affiliation 3

‡ These authors contributed equally to this work.

Abstract: A single paragraph of about 200 words maximum. For research articles, abstracts should give a pertinent overview of the work. We strongly encourage authors to use the following style of structured abstracts, but without headings: (1) Background: place the question addressed in a broad context and highlight the purpose of the study; (2) Methods: describe briefly the main methods or treatments applied; (3) Results: summarize the article's main findings; (4) Conclusion: indicate the main conclusions or interpretations. The abstract should be an objective representation of the article, it must not contain results which are not presented and substantiated in the main text and should not exaggerate the main conclusions.

Keywords: keyword 1; keyword 2; keyword 3 (List three to ten pertinent keywords specific to the article; yet reasonably common within the subject discipline.)

0. How to Use this Template

The template details the sections that can be used in a manuscript. Note that the order and names of article sections may differ from the requirements of the journal (e.g., the positioning of the Materials and Methods section). Please check the instructions on the authors' page of the journal to verify the correct order and names. For any questions, please contact the editorial office of the journal or support@mdpi.com. For LaTeX-related questions please contact latex@mdpi.com.

1. Introduction

The introduction should briefly place the study in a broad context and highlight why it is important. It should define the purpose of the work and its significance. The current state of the research field should be reviewed carefully and key publications cited. Please highlight controversial and diverging hypotheses when necessary. Finally, briefly mention the main aim of the work and highlight the principal conclusions. As far as possible, please keep the introduction comprehensible to scientists outside your particular field of research. Citing a journal paper [1]. Now citing a book reference [2] or other reference types [3].

2. Materials and Methods

Materials and Methods should be described with sufficient details to allow others to replicate and build on published results. Please note that publication of your manuscript implicates that you must make all materials, data, computer code, and protocols associated with the publication available to readers. Please disclose at the submission stage any restrictions on the availability of materials or information. New methods and protocols should be described in detail while well-established methods can be briefly described and appropriately cited.

35 Research manuscripts reporting large datasets that are deposited in a publicly
36 avail-able database should specify where the data have been deposited and provide the
37 relevant accession numbers. If the accession numbers have not yet been obtained at the
38 time of submission, please state that they will be provided during review. They must be
39 provided prior to publication.

40 Interventionary studies involving animals or humans, and other studies require
41 ethical approval must list the authority that provided approval and the corresponding
42 ethical approval code.

43 This is an example of a quote.

44 3. Results

45 This section may be divided by subheadings. It should provide a concise and precise
46 description of the experimental results, their interpretation as well as the experimental
47 conclusions that can be drawn.

48 3.1. Subsection

49 3.1.1. Subsubsection

50 Bulleted lists look like this:

- 51 • First bullet;
- 52 • Second bullet;
- 53 • Third bullet.

54 Numbered lists can be added as follows:

- 55 1. First item;
- 56 2. Second item;
- 57 3. Third item.

58 The text continues here.

59 3.2. Figures, Tables and Schemes

60 All figures and tables should be cited in the main text as Figure 1, Table 1, etc.

Figure 1. This is a figure. Schemes follow the same formatting. If there are multiple panels, they should be listed as: (a) Description of what is contained in the first panel. (b) Description of what is contained in the second panel. Figures should be placed in the main text near to the first time they are cited. A caption on a single line should be centered.

Table 1. This is a table caption. Tables should be placed in the main text near to the first time they are cited.

Title 1	Title 2	Title 3
Entry 1	Data	Data
Entry 2	Data	Data

61 Text.

62 Text.

63 3.3. *Formatting of Mathematical Components*

This is the example 1 of equation:

$$a = 1, \quad (1)$$

64 the text following an equation need not be a new paragraph. Please punctuate equations
65 as regular text.

66 This is the example 2 of equation:

$$a = b + c + d + e + f + g + h + i + j + k + l + m + n + o + p + q + r + s + t + u + v + w + x + y + z \quad (2)$$

Figure 2. This is a wide figure.

67 Please punctuate equations as regular text. Theorem-type environments (including
68 propositions, lemmas, corollaries etc.) can be formatted as follows:

69 **Theorem 1.** *Example text of a theorem.*

70 The text continues here. Proofs must be formatted as follows:

71 **Proof of Theorem 1.** Text of the proof. Note that the phrase “of Theorem 1” is optional
72 if it is clear which theorem is being referred to. □

73 The text continues here.

74 4. Discussion

75 Authors should discuss the results and how they can be interpreted from the
76 perspective of previous studies and of the working hypotheses. The findings and their
77 implications should be discussed in the broadest context possible. Future research
78 directions may also be highlighted.

79 5. Conclusions

80 This section is not mandatory, but can be added to the manuscript if the discussion
81 is unusually long or complex.

82 6. Patents

83 This section is not mandatory, but may be added if there are patents resulting from
84 the work reported in this manuscript.

Author Contributions: For research articles with several authors, a short paragraph specifying their individual contributions must be provided. The following statements should be used “Conceptualization, X.X. and Y.Y.; methodology, X.X.; software, X.X.; validation, X.X., Y.Y. and Z.Z.; formal analysis, X.X.; investigation, X.X.; resources, X.X.; data curation, X.X.; writing—original draft preparation, X.X.; writing—review and editing, X.X.; visualization, X.X.; supervision, X.X.; project administration, X.X.; funding acquisition, Y.Y. All authors have read and agreed to the published version of the manuscript.”, please turn to the [CRediT taxonomy](#) for the term explanation. Authorship must be limited to those who have contributed substantially to the work reported.

Funding: Please add: “This research received no external funding” or “This research was funded by NAME OF FUNDER grant number XXX.” and “The APC was funded by XXX”. Check carefully that the details given are accurate and use the standard spelling of funding agency names at <https://search.crossref.org/funding>, any errors may affect your future funding.

Data Availability Statement: In this section, please provide details regarding where data supporting reported results can be found, including links to publicly archived datasets analyzed or generated during the study. Please refer to suggested Data Availability Statements in section “MDPI Research Data Policies” at <https://www.mdpi.com/ethics>. You might choose to exclude this statement if the study did not report any data.

Acknowledgments: In this section you can acknowledge any support given which is not covered by the author contribution or funding sections. This may include administrative and technical support, or donations in kind (e.g., materials used for experiments).

Conflicts of Interest: Declare conflicts of interest or state “The authors declare no conflict of interest.” Authors must identify and declare any personal circumstances or interest that may be perceived as inappropriately influencing the representation or interpretation of reported research results. Any role of the funders in the design of the study; in the collection, analyses or interpretation of data; in the writing of the manuscript, or in the decision to publish the results must be declared in this section. If there is no role, please state “The funders had no role in the design of the study; in the collection, analyses, or interpretation of data; in the writing of the manuscript, or in the decision to publish the results”.

Abbreviations

The following abbreviations are used in this manuscript:

MDPI	Multidisciplinary Digital Publishing Institute
DOAJ	Directory of open access journals
TLA	Three letter acronym
LD	Linear dichroism
